1. Users are responsible for choice and application of stopper used. Stopper diameter and design must be qualified by the user for desired fit and function through performance testing for each stopper supplier used.

2. A. The inner lip contour is subject to normal manufacturing variations.

8. C. Dimension controls opening to 0.008 down from top of finish excluding radius or taper at top of opening. It is desirable for good stopper fit to control opening below that point to be equal to or slightly larger than smallest opening above.

C. C1 dimension to be measured at a point .750 down from top of finish.

D. I1 dimension of throat opening is measured through full length of glass finish and neck.

3. Raised ring to appear around seal to identify and distinguish it from the 3150 finish.

4. Not recommended for use with crown closures.
