1. Undermatch at guide ring is considered to be ideal if made .005 to .006. To provide for guide ring shift, .005 undermatch is permitted on finish side only. With no overmatch allowed. The .006 guide ring depth may be varied at the manufacturer's option.

2. Refer to the respective G.P.I. 600 series drawings for all specifications not shown on this drawing.

3. It is the responsibility of the glass container purchaser to consult with its closure and container supplier to determine the appropriate pressure limits for the container, its finish, and the closure chosen, when the container will be subjected to pressure or used for contents under pressure.
